

Advisory & Consulting Solutions

The most effective waste management programs are developed through holistic, tailored approaches.

Utilizing diverse capabilities and expertise, we deliver comprehensive, turnkey strategies that consider every risk, need and value creation opportunity.

- Thorough site investigations, waste profiling, waste stream audits and lifecycle assessments
- Tailored sustainability consultation, strategy development, and program launch and management services
- End-to-end coverage of sustainability goals and operations, KPI reporting and downstream verification
- Complete management of permitting, insurance, licensing, reporting, invoicing and other regulatory paperwork
- Dedicated account support from remote, on-site or embedded experts, alongside a digital portal for streamlined transparency

The Reworld™ Difference

A nation-wide network of technology, facilities and partnerships

Decades of experience from world-class experts, industry leaders and innovators

Trailblazers in environmental justice, sustainability-linked financing and circularity

Transparent, accessible and centralized communication, reporting and insights

Reliable and comprehensive account management, service and support

End-to-end sustainable solutions that drive financial and environmental goals

Benefits

Ensure your sustainability strategies—such as those pertaining to waste management, operational optimization, risk assessment, brand elevation and environmental performance—are properly prudently developed and launched, offering:

Compliance – Waste is thoughtfully and thoroughly managed and documented in accordance with all local and federal regulations, preventing violations that impede strategies, halt operations and revoke licensing

Profitability – Waste is effectively and economically separated into recoverable components, utilizing resources that offset raw material costs, can be sold for new revenue and spur material rebates

Sustainability – Waste is efficiently and environmentally removed; treated and reused, recycled, turned into fuel or energy; or safely returned to nature as raw components, creating cycles that optimize resource value, reduce carbon footprints and regenerate ecosystems
